Pre-Calculus						
Holt McDougal	Precalculus with Limits: A Graphing Approach Pupil Edition	Larson, et al.	2008	9-12	9780618851522	97% NCTM = 100%
	Key Features: The text provides opportunities for students to view example solutions numerically, algebraically, verbally, and graphically, so that they understand how each problem can be solved in various ways. The text incorporates ongoing review and revisiting of concepts ("spiraling") for retention and greater mastery. Program presents examples and exercises in such a way that they increase in difficulty and include questions that require a synthesis of concepts and/or multiple problem-solving steps. The text is designed so that all solutions, examples, and explanations begin and end on the same page, so that students do not become distracted during their initial reading and, more importantly, during the review and study process. The text consistently emphasizes the role of technology, including graphing calculators and computer applications. The examples and exercises assume that each student has constant access to a graphing calculator.

Pearson Education publishing as Prentice Hall	Elementary Statistics: Picturing the World Stats: Modeling the World, AP* Edition Student Edition (HS Binding)	Larson, Farber	2009	9-12	9780136007203	100% NCTM = 100%
	Note: May be used for AP and non-AP courses. Key Features: Openers show students how the chapter topic fits into the bigger picture of statistics by placing it in the context of real world data and connecting it to concepts learned in earlier chapters. Titled examples paired with unique Try It Yourself problems illustrate every concept in the text with one or more step-by-step examples that often conclude with an interpretation step. These examples are numbered and titled for easy reference and are immediately followed with a similar problem which provides the opportunity for immediate practice and reinforcement. Highly graphical approach—Incorporates more than 750 graphical displays. The text strikes a balance between computation, decision making and conceptual understanding. A large variety of real-world applications to illustrate to students the relevance of the material they are learning. Gives instructors the freedom to determine the degree of technological dependency their individual course will require.

	Stats: Modeling the World, AP* Edition Student Edition (HS Binding)	Bock, et al	2007	9-12	9780131876217	100% NCTM = 100%
	Note: Recommended for AP and non-AP courses. Key Features: Practical data analysis and graphics gets students “doing statistics” and “thinking statistically” from the start. Students learn how to Think about the statistical issues at hand, how to Show proper application of statistical techniques, and how to Tell others what they have learned. This “Think, Show, Tell” approach to problem solving is repeated throughout the book to consistently emphasize statistics in context. Sections in each chapter illustrate the most common misuses and misconceptions of statistical thinking to prepare students with the tools to detect statistical errors and offer practice in debunking misuses of statistics. The book is organized into short, teachable chapters. Each chapter covers the material for one or two classes (depending on schedule and length). Reality Checks ask students to check their results to make sense in the context of the problem before interpreting the results, illustrating that Statistics is about understanding the world with data. Notation Alerts emphasize the importance of clear communication while demonstrating that proper notation is part of the vocabulary of Statistics.
